

Infra Dig Masterclass – Why Infrastructure Goes Wrong

Angus Leslie Melville

26/07/2024

The latest in the Infra Dig Masterclass series – delving into why infrastructure projects go wrong and the 10 Cardinal Rules to avoid this outcome – is a must listen... especially for people launching their careers in infra.

In this episode, IJGlobal content director Angus Leslie Melville sits down to chat for a second time with old friend Ravi Suri, global head of sustainable finance and impact investing at KPMG.

This podcast – which runs for 35 minutes – is a far-ranging discussion that covers all the key points of how projects go wrong across (pretty much) every single sector in the infra and energy asset class takes the listener through what must not be done (citing examples) and then how to do it right.

This latest episode can be accessed on Spotify (embedded above) as well as through [Apple Podcasts](#) and the [Amazon service](#). It is also hosted across a slew of other platforms and is open access on all of them.

Ravi gives the listener the benefit of his many years of experience across the infrastructure and energy sectors, running them through the dos and the don'ts of how to make a project work.

Examples run through the UK rail system, comparing it to how the system was unbundled in Argentina – contrasting the regulation of the assets and how to do it correctly for private capital to be deployed, while still achieving value for money (VFM).
